Versa™

# VERSA Oral Appliance:

Breathe Well, Sleep Well

## WHY MAD Oral Appliance Therapy

Mandibular advancement devices (MADs) help clear the airway by moving the jaw forward, while tongue-stabilizing devices (TSDs) help clear the airway by moving the tongue forward

## What are the advantages of MAD device?

MADs are usually recommended to treat mild forms of sleep apnea, reducing the symptoms and effects by moving your jaw into a forward position while you sleep. This position will **expand your airway, helping you breathe better**

## Advantages of Oral Appliance Therapy

Oral appliance therapy is an effective, non-invasive treatment that fits easily into your lifestyle. Patients like oral appliance therapy because it is:

Easy to wear

Quiet

Portable

Convenient

Comfortable

Easy to care for

## What is the Vivos Versa?

The Vivos Versa is a custom-made intraoral appliance that is used to treat mild to moderate OSA and snoring in adults. It helps to advance your lower jaw which aids in opening the upper airway while you sleep.

There are 2 options available and based on your provider's recommendations.
